

Spring into
Summer
Maintenance Special!

Is your truck ready for the long hot summer? Your Isuzu-built vehicle is one tough truck, but even the toughest truck needs some attention. Below are a few more preventive maintenance tips that can help keep your truck operating efficiently through the summer.

AIR FILTER

A clean air filter is one of those items that is often overlooked. On your N or W-Series truck, the air cleaner is easy to access and easy to replace. A clean filter can help improve your fuel mileage and keep your engine running at peak performance.

TIRE SAFETY

When the thunderstorms hit and the rain sweeps across the road, nothing is more important than matched tread, enough tread and proper inflation. Having all-season tires in all six positions and rotated every 10,000 miles will extend tire life, saving you money.

WINDSHIELD WASHER MAINTENANCE AND WIPER BLADES

How about the bug catcher (windshield) on the front of your N or W-Series truck? Use a washer solution, combined with new wiper blades.

ENGINE OIL CHANGES

Engine oil not only keeps the engine lubricated, but also helps keep your engine cool. Due to summer heat, oil may breakdown and not provide the necessary viscosity to keep your engine in peak running condition.

ANTIFREEZE

Antifreeze is normally associated with winter, but it is equally important during the heat of summer.

See Us For Current Specials

As an authorized Isuzu dealer we have the approved parts, lubricants, tools and expertise to keep your Isuzu-built vehicle in top condition. Let us help you lower your operating costs, extend the life of your truck, and keep it on the road making money for you.

Limited time offer. See your authorized Isuzu dealer for details and limitations. Participating dealer only.
